Ravi Avancini

AI Automation Engineer · n8n · Python · HubSpot & Salesforce · Zapier · Make

ravi.avancini@gmail.com · r4vsdev.github.io · github.com/r4vsdev · linkedin.com/in/raviavancini
Remote from Brazil (UTC-3), works US hours · contract or full-time · open to relocation

SUMMARY

I automate the work between a company's tools in n8n, Zapier, Make and Python, and I design for failure (retries, no duplicates, kill switches, alerts): an automation that breaks silently costs more than the work it replaces. I build with Claude Code as a pair programmer; the design and the testing are mine.

HIGHLIGHTS

- **160K+ views in about 8 weeks** from an AI video channel my n8n pipeline ran on autopilot.
- **Website lead → HubSpot or Salesforce in about 4 s**, then scored, routed and announced in Slack about 5 s after the form.
- **Found a law firm's website hacked** (gambling spam on its homepage) and rebuilt it: PageSpeed **99**.
- **7,600 jobs screened in one run** by the job-search bot I built.

SELECTED BUILDS

own projects and demos, 2025 – present

Speed-to-lead: website form → CRM, enriched, scored and routed (Python, real HubSpot + Salesforce, demo data) · GitHub ↗

- Company, contact, deal and message written in a median 3.9 s (HubSpot) / 5.7 s (Salesforce); no duplicates, retries on rate limits; a failed step never loses the lead.
- Reads the company's website; a local AI model (Ollama) tags industry and intent; 0–100 score with readable reasons, owner by rules + round-robin, Slack alert. SQL stats page; also built in Zapier and Make; 58 tests.

Viral Reels Factory: automated AI video channel (n8n, Google Veo on Vertex AI)

- AI picks the idea, Veo makes the video, I approve with one tap on Telegram, and it posts to TikTok and YouTube 3 times a day. 160K+ views in about 8 weeks. Kill switch; an expired key stops the run and alerts me.

Job-search bot: finds, filters and fills job applications (Python, Playwright, SQLite)

- 14 sources, AI fit judging, reads any application form and fills it from a learned answer bank; a submit lock blocks sending anything without my approval.

Creator program automation: six n8n workflows, working demo with public code and video · GitHub ↗

- Creator discovery (Apify), AI brand-fit scoring, Airtable CRM sync, contracts, reminders, weekly reports. Also: an outreach app (TypeScript) that never sends the same email twice, even after a crash; 122 tests.

EXPERIENCE

Freelance Web Developer & Digital Marketing · Self-employed

2025 – Present · Remote

- **Law firm, Vitória, Brazil (2026):** found the old site had been hacked and was showing gambling and adult spam on its homepage; recovered the lost domain, moved DNS to Cloudflare and rebuilt the site (desktop PageSpeed 99, 0.7 s load vs about 5 s). Deploy checks block SEO and legal-advertising rule breaks. Invoice photo → spreadsheet row via AI vision.
- **Countertop installer, Atlanta (2025):** built their first website (10 pages, kitchen and bathroom landing pages, leads to Google Sheets via n8n, conversion tracking) and first Google Ads campaign; inbound calls on day one.

Research Engineer · Vale-funded R&D project, IFES

2019 – 2021

- Vale needed railway inspection that doesn't block cargo trains. I researched and designed several platforms; the one we carried forward became a patented autonomous inspection vehicle.

SKILLS

Automation	n8n (sub-workflows, error handling, schedules, webhooks), Zapier, Make, Slack, REST APIs, OAuth
CRM & data	HubSpot and Salesforce APIs, Clay, Airtable, Google Sheets, SQL (SQLite)
AI	OpenAI, Claude, local LLMs (Ollama), structured output, prompt-injection guards, Google Veo / Vertex AI, Vapi
Code & infra	Python (FastAPI, pytest, Playwright), TypeScript, React, GitHub Actions, Google Cloud, Cloudflare, Netlify
Languages	Portuguese (native), English (fluent)

EDUCATION

B.Eng. Mechanical Engineering, IFES (Instituto Federal do Espírito Santo) · 2016 – 2021

Full-stack web development, The Odin Project (Ruby, Rails, JavaScript, test-driven development) · 2022 – 2023
