Ravi Avancini

GTM Engineer · Lead Scoring & Routing · HubSpot · Salesforce · Clay · Outbound

ravi.avancini@gmail.com · r4vsdev.github.io · github.com/r4vsdev · linkedin.com/in/raviavancini
Remote from Brazil (UTC-3), works US hours · contract or full-time · open to relocation

SUMMARY

I build the systems that find, qualify and follow up with customers, in Python, n8n, Zapier, Make and Clay. I design for failure (retries, no duplicates, alerts): a lead lost in a broken automation is revenue lost. I build with Claude Code as a pair programmer; the design and the testing are mine.

HIGHLIGHTS

- **Website lead → HubSpot or Salesforce in about 4 s**, then scored 0–100, routed and sent to Slack within about 5 s.
- **160K+ views in about 8 weeks** from an AI video channel my n8n pipeline ran on autopilot.
- **Inbound calls on day one** from the first website and Google Ads campaign I built for a countertop installer in Atlanta.

SELECTED BUILDS

own projects and demos, 2025 – present

Speed-to-lead: inbound leads → CRM, scored and routed (Python, real HubSpot + Salesforce, demo data) · GitHub ↗

- Company, contact, deal and message written in a median 3.9 s (HubSpot) / 5.7 s (Salesforce); no duplicates, retries on rate limits; a failed step never loses the lead.
- Reads the company's website; a local AI model tags industry and intent; 0–100 score with reasons a sales manager can read, owner by rules + round-robin, Slack alert. Rules overrule the AI on spam.
- SQL stats page (speed to lead median and p95; leads by grade, owner, source). Also built in Zapier and Make.
- **Clay (demo):** ICP table of 10 real B2B companies (enrichment, AI web research, formula score and tier) pushed into HubSpot by a rerun-safe Python importer.

Outbound engine: n8n lead engine feeding Instantly, then my own outreach app (own outreach, no clients) · Showcase ↗

- n8n, built by hand: Google Maps and Sales Navigator leads, email finding across 4 rotating API keys, 50–90 verified leads a day fed into Instantly: about 90 personalized emails a day on 3 warmed-up domains (deliverability, bounce rates, list cleaning). Then an outreach app that never sends the same email twice, even after a crash (122 tests).

Viral Reels Factory: automated AI video channel (n8n, Google Veo)

- AI picks the idea, Veo makes the video, I approve on Telegram, it posts to TikTok and YouTube 3 times a day. 160K+ views in about 8 weeks. Also: creator-program demo, six n8n workflows with AI fit scoring (GitHub ↗).

EXPERIENCE

Freelance Web Developer & Digital Marketing · Self-employed

2025 – Present · Remote

- **Countertop installer, Atlanta (2025):** built their first website (10 pages, separate kitchen and bathroom landing pages, leads to Sheets via n8n, conversion tracking, heatmaps) and first Google Ads campaign, keywords matched to what homeowners search; inbound calls on day one.
- **Law firm, Vitória, Brazil (2026):** found the old site had been hacked and was showing gambling spam on its homepage; recovered the lost domain, moved DNS to Cloudflare, rebuilt the site (desktop PageSpeed 99, 0.7 s load) and audited its local search presence.

Research Engineer · Vale-funded R&D project, IFES

2019 – 2021

- Vale needed railway inspection that doesn't block cargo trains. I researched and designed several platforms; the one we carried forward became a patented autonomous inspection vehicle.

SKILLS

CRM & GTM	HubSpot and Salesforce APIs, Clay, lead scoring and routing, Sales Navigator, Instantly, Google Ads
Automation	n8n, Zapier, Make, Slack, webhooks, REST APIs, Airtable, Google Sheets
AI	OpenAI, Claude, local LLMs (Ollama), structured output, Vapi voice agents
Code & data	Python (FastAPI, pytest, Playwright), SQL (SQLite), TypeScript, React, GitHub Actions
Languages	Portuguese (native), English (fluent)

EDUCATION

B.Eng. Mechanical Engineering, IFES (Instituto Federal do Espírito Santo) · 2016 – 2021

Full-stack web development, The Odin Project (Ruby, Rails, JavaScript, test-driven development) · 2022 – 2023
